

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

Based on the 25 signs have been analyzed the Occupational Health and Safety sign in the Hermina hospital Bekasi, the writer concludes the results that can be explained as follows:

The analysis contained 25 data from all signs inside the Hermina hospital Bekasi and found many types of signs in the form of Globally Harmonized System (GHS) amount 32% with *other signs* category. This sign is a sign of a rhombus shape and a dominant red color that indicates a warning. Furthermore, there is also a prohibition of 24% contains circle sign with red and white as a sign of the prohibition of the category, while the 16% mandatory mark with blue color is dominant and the square is characteristic. Another finding, there are 12% signs of first aid signs that has same percentage with warning signs in that category contains a square shape and characteristic green and white colors as first aid category whereas yellow and a triangle as a warning sign category. Meanwhile, the lowest number is for fire equipment signs 4% that has a triangle shape and red as a form of fire equipment and fire action sign.

Based on the data has been analyzed, the writer can conclude that the sign has denotation and connotation meaning which is formed by a shape and color produced in the Occupational Health and Safety signs. The

meaning produced can be in the form of warning, prohibition, mandatory, form safe and safety signs as well as fire equipment and fire action signs. The characters on each sign are also supported by red as a warning color or fire, green as safe condition, yellow as a warning and blue as an obligation or mandatory. Signs are very influential in safety, security and appeal. This can be seen in the Occupational Health and safety sign as a form of communication through a sign. Finally, the writer can conclude that signs have big influence in a language study which cannot be separated from communication and life.

### **B. Suggestion**

Based on the conclusions that have been described, the writer suggests that although speaking is one of the effective communications in language, signs also have an important role in language as a communication both in difficult conditions such as disasters and others. Signs can be in the form of warnings, information, advice, even security and safety depend on occupational health and safety signs. Then, the writer wants to give something new in the development of communication that there is not only through spoken or written language humans being can communicate but also they can communicate with signs. In addition, by understanding the meaning of signs it can also help us to communicate with friends who have the lack of hearing because they cannot get the message conveyed using verbal communication.
