

## CHAPTER V

### CONCLUSION

In this chapter there are conclusions and suggestions related to analysis data. Conclusions are drawn from all the data analysis that has been made in this thesis, as well as suggestions made by the author.

#### 1. Conclusion

After the writer analyzed the utterances found in the conversation between the two main characters in the Bad Boys movie, the writer can draw some conclusions. Sociolinguists are also interested in the different types of linguistic variation, there are 3 kinds of linguistic variations including pronunciation, grammar, and vocabulary. Within each of these linguistic levels, there is variation which offers the speaker a choice of ways of expression. They provide us with different linguistic styles for use in different social contexts. Choices may even involve different dialects of a language, or quite different languages

There are only two linguistic variations use in this study, namely grammar and vocabulary. The data obtained through conversations with African Americans or AAVE. Then, the process of the occurrence of linguistic variations in AAVE is by comparing how the AAVE is conveyed and how the standard language is delivered. The author found 32 data on linguistic variations in AAVE, namely 26 data in grammar and 6

data in vocabulary. The data was found by comparing two languages, namely vernacular language and standard language.

## 2. Suggestion

There are other things in vernacular language or AAVE that are interesting to analyze. Therefore, the researcher suggests to students of the English Department to find out more about vernacular language or AAVE.

### 1. Teacher

Vernacular language or AAVE is an interesting language to understand and research, especially by a teacher, it is mandatory for them to know more about various languages, to recognize to their students a language that they do not know, so that they can care more about the language of other communities.

### 2. Student

As students, we must know various languages, especially vernacular or AAVE. It is a unique language to learn because there is much slang in it and we can use it in conversation with our close friends.

### 3. Other researcher

Vernacular language or AAVE is also recommended to other researchers to continue researching with vernacular language data sources, because interestingly this language uses mother tongue and slang so it is very easy for students like us to research, by researching from other data sources.
