

CHAPTER V

CONCLUSION AND SUGGESTIONS

A. Conclusion

After completing all description based on the contents of previous chapter, the writer has an inference based on references used for composing this research. The author is able to compare the two languages using contrastive analysis. There are similarities and differences in the simple past tense in English and German in the novel Harry Potter and the Sorcerer's Stone. The differences and similarities of the two languages are analyzed syntactically and morphologically.

The comparison between English and German languages is based on simple past tense. From the analysis, it can be concluded as followed:

1. First Question

The answer for the first question is there are four similarities of simple past tense in both languages. English and German have the same sentence structure, subject-verb-object. Subject, verb, and object in sentences in English and German have the same position and word.

2. Second Question

The answer for the second question is there are five differences of simple past tense in both languages. Both languages have differences in the Affiliation Morpheme, definite article, word, affixations, and pronouns. Some German languages use phrases in sentences. There is a difference in conjugation between verbs in English and German.

B. Suggestion

After finishing the research, with giving conclusion of contrastive analysis of simple past tense between English and German languages, the writer has suggestions to the readers that may be useful in the future as followed:

1. For readers

The Readers should know the differences and similarities between English and German by using contrastive analysis. This research describes the differences and similarities in the two languages.
