

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

The conclusion is discussed based on the writer's initial inquiry in the first chapter, while the suggestions are meant to inform future researchers who are interested in utilizing the same theory to analyze the data. After evaluating the data, it was found that Colleen Hoover's novel *It Ends With Us* contains a head and a modifier in the noun phrase and verb phrase of the compound sentence. In order to create this classification, Carnie's tree diagram and Noel Burton-Roberts' theory of sentence structure function were both used. The following is the conclusion:

1. The writer analyzed 25 data of sentence structure function of compound sentence that were used in the novel. The analysis study findings the total of NP and VP of sentence structural function with 52 of the data noun phrase, 50 of the data verb phrase. From the data NP and VP in compound sentences also have Head and Modifier. In NP and VP must have a Head, but not all NP and VP have a Modifier to modify the Head.
2. The writer analyzed the sentence structure function of compound sentences by using a tree diagram as a comparison. Of the 25 data, the writer can illustrate more than one tree diagram according to the data taken.

## B. Suggestion

In this part, the writer would like to provide some suggestions for the campus, linguistics lecturers, and the other researchers based on the research findings and discussion. It can be listed:

### 1. For the campus

More support should be offered by the campus and all students should have access to the specified place for conducting research. The most crucial element is that the campus must include some facilities for studying, such a library that is supplemented with more specialized books on each field of study and an upgraded internet access to enhance the ability for students to search for everything they require while carrying out a research.

### 2. For the linguistics lecturers

They should be more inventive and creative while teaching linguistics and they should provide detailed explanation in an interactive way. The writer here aims that the analysis would be useful in teaching the students about the sentence structure of compound sentences, and how to create the tree diagrams that have been illustrated in this research.

### 3. For all further researchers

The writer hopes that this research will provide as a reference for all future researchers who have similar problems and have a common enthusiasm for studies that analyze the sentence structure function of compound sentences using tree diagrams. Expect any additional research to complete this technique.
