

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

Based on analysis of morphology behavior in *Snow White* Short Story by Desideria Guiciardini focus on point simple, compound, complex words. simple word is a word that stands alone sign side by side with other words. while a compound is a word consisting of two different syllables that are fused to form a new word meaning, as well as a complex word consisting of more than two or three different words so that it makes a different meaning. Total of data objects are thirty five. Those data are taken from six chapters of the *snow whiteshort* story by Desideria Guicciardini, they are: First chapter have five data on simple (two data), Compound (one data), Complex (two data), second chapter is simple (one data), Complex (three data), third chapter simple (two data), Complex (three data), fourth chapter is simple (twoe data), Complex (four data), fifth chapter is simple (two data), complex (one data), sixth chapter is *simple* (seven data), Compound (one data), Complex (four data).

Then the analysis can be taken the implicit

1. Identifying creation of simple, compound and complex word in the Snow White short story by Desideria Guicciardini can be done by reading and analyzed the short story.

2. Classify and distinguish the simple word in short story are queen, blood, forest, bread, honey, palace, woman, magic, farmers, side, ebony, horse, prince. Compound word are snowflakes, and sunset, complex word are beautiful, actually, jealousy, horrified, happily, quietly, badly, friendly, reflection, chattily, sparkly, careful, quickly, sprawled, youngest, astonishment, and overjoyed.
3. The most dominant in simple word (46%) compound (6%) complex word (48%).

B. Suggestion

In this research there are much lack that made by the writer both in the theory or the analysis, but the writer hopes that this research can help the readers to understand more about morphology especially about simple, compound, and complex word.

1. For writers and the other researchers

To comprehend the kind of Simple word Simple word only have one words formed from a single root, comprising of a single morphem, nothing added to it. Compound word divided into two classification without space. Considered to be a combination of independent words, and complex word which itself consists of the suffix and the base. These contain words that contain multiple morphemes made up of two or more morphemes.

2. For readers

To share and give the result of the study about morphology especially simple, compound, and complex words. Hopefully who have learning and interested in this field also reading short story and finding simple, compound and complex word.
