

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter consists of conclusion and suggestion. Conclusion is the result of the research that is drawn from question of the research. Meanwhile, suggestion describes advices for people related to this research.

A. Conclusion

After analyzing the previous chapter, the writer concludes several points as follows:

1. Complex transitive is a sentence that has two complements, the complements are direct object (NP) and object predicative (NP, AP, or PP). In fact, the predicative object other than the prepositional phrase (PP) is very difficult to find, even the writer cannot find the adjective phrase (AP) of the 4 articles. The object predicative that often appears is the prepositional phrase (PP), the prepositional phrase is used to show space and time because the theme of the article chosen by the writer (World, Asia) is that prepositional phrases appear more often than noun phrases and adjective phrases. The analysis showed that among 4 articles analyzed, there are 25 sentences using complex transitive verb. The amount and percentage of the types of object predicative of complex transitive verb was analyzed by using tree diagram. Noun phrase (NP) were found 2 times (8,69%), adjective phrase (AP) were found 0 times (0%), and prepositional phrase (PP) were found 23 times (91,30%). It can be concluded

that in 4 articles in The Wall Street Journal frequently used prepositional phrase (PP) of complex transitive verb.

2. As mentioned previously that complex transitive is a sentence that has two complements, the complements are direct object (NP) and object predicative (NP, AP, or PP), the writer drew a conclusion of direct object and object predicative from theory Burton-Roberts. The definitions stated in this theory are used to analyze the data found in the articles. The writer also referred to this theory to decide type of object predicative (Noun Phrase, Adjective Phrase, or Prepositional Phrase).

B. Suggestion

In this part, the writer would like to provide some suggestions for the campus, linguistics teachers, and the other researchers based on the research findings and discussion. It can be listed:

1. For the students

If the students are interested in studying about the use of verb, especially complex transitive verb, they can use online newspaper for example The Wall Street Journal. Online newspapers offer validity, accuracy, and novelty of English sentences. Further, the students can easily understand sentences and their function by using tree diagram.

2. For all further researchers

The writer suggests that all future researchers used this research as a resource, particularly those who face comparable issues and have a similar enthusiasm for sentence-based tree diagram research. If researchers are interested to analyze the similar topic, the writer recommends to study it from a different point of view.
