

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the writer explains the conclusion and suggestions for readers to better understand their research.

A. Conclusion

The followings are the conclusions that the authors draw after conducting studies and analyzing data from utterances that contain dynamic verbs.

1. According to this study, the types of dynamic verbs are durative, punctual, telic, and atelic. The writer found all the four types of dynamic verbs. The findings are: telic has the percentage of 45% and is the most found type, durative has the percentage of 35% and is placed in second most found type, punctual has the percentage of 15% and is in third place, and atelic has the percentage of 5% and is the least found type.
2. This research also reveals three subcategories of dynamic verbs, which are activity, achievement, and accomplishment. The writer found all subcategories in this research. The findings were: accomplishment was 56.7% as the most found data, achievement was 33.3% which was in the middle position, and activity contributed 10% and was the least data.

B. Suggestion

After writing this research, the writer thinks about some suggestions for progress and convenience in the process of writing research in the future. The suggestions are as follows:

1. For English Learners

The writer sees that there are many students with linguistics or semantics interests specifically, who are interested in taking titles that are not far from discussing situations and aspects. Therefore, the writer recommends that in later research it can be developed in its analysis by using more supporting sources for the main theory used.

2. For General Readers

For the readers of this research, the writer hopes to use this research as one of the tools to understand more about situations and dynamic verbs and the relationship between the types of dynamic verbs and their subcategories. The writer recommends reading chapter 4 and using it as an example for how to develop the analysis.

3. For STBA JIA

While compiling this research, the writer hopes that the STBA JIA library can provide more books related to linguistics or semantics because many students are enthusiastic about taking linguistics as a field of study that will be used as research later.
