

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

#### **A. CONCLUSION**

Based on the analysis, it can be concluded that there are several job descriptions from waiters and formula officer. This includes coming up with new ideas about food preparation, delivering food and managing food for people who are in a coma for a long time in treatment, and managing food for people who are in a coma for a long time in treatment. This includes coming up with new ideas about food preparation, delivering food, and managing food for people who have been in a coma for a long time in treatment. Based on these observations, several job descriptions of waiters and formula workers were found, but there are three main tasks that must be continuously improved by waiters and formula workers at PRIMAYA Hospital Bekasi Timur. managing food variations, handling complaints properly and correctly, conducting training for 1 full month, and understanding nutritional care in accordance with the hospital nutrition guidebook and the rules applied in the hospital. The job description led to the conclusion that being a waitress and a formula clerk is not a job that can be taken lightly. understanding of food processing, good communication, food taste, food distribution at the time of production according to the patient's illness, types of food that can be consumed according to the patient's condition while in the hospital, and always being present in the hospital's monthly assessment. Based on the constraints that have been discussed previously. There are three obstacles, namely in the variations in food,

handling complaints, and general nutrition training. These obstacles can be overcome directly by the author during the internship.

## **B. Suggestion**

In the advice section, the researcher provides suggestions to various parties involved in this report which are expected to further develop this report and the waiter and formula officers from PRIMAYA Hospital Bekasi Timur. These suggestions are as follows:

1. For PRIMAYA Hospital Bekasi Timur,

the procurement of processed ingredients and existing equipment may be added so that more variations of food can be made and decorated according to the nursing class.

2. For future researchers,

they should be able to develop this research further by continuing to learn about nutritional care and the importance of nutrition for daily life and sharing the knowledge gained during internships in the hospital.
